#### **DETAILED ACTION**

## **Double Patenting**

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 39 is provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1 and 20-21 and 26-27 of copending Application No. 10/704,868. Although the conflicting claims are not identical, they are not patentably distinct from each other because of similarly claimed steps of providing multiple connector assemblies, securing the devices to portions of the vertebrae (including the facet area), providing spinal support structures, and allowing the structures to move post operatively.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Art Unit: 3733

Claims 39 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 7,083,622. Although the conflicting claims are not identical, they are not patentably distinct from each other because each claims providing and securing components to a vertebral body, positioning the two bodies at a desirable distance from each other, providing support, and allowing the connected vertebral connectors to move with respect to one another.

#### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 39 is rejected under 35 U.S.C. 102(e) as being anticipated by Drewry et al. (US Publication 2003/0083657). Drewry et al. disclose a method for supplemental spinal fixation including the steps of providing a first and second connectors (30, as shown in Fig. 1), positioning and securing the connectors to vertebrae (see again Fig. 1) and providing a spinal support structure (80, also disclosed as a rod). The reference discloses use of the anchors and connectors (see pars 0005 - 0007) and that the elongate member is flexible. As required by the claim, the spinal support structure should permit postoperative movement of the adjacent vertebrae structures, moving

Art Unit: 3733

relative to one another. In paragraph 0005, Drewry et al. disclose a flexible member that would enable the vertebrae to flex, move, or permit relative movement to one another.

## Allowable Subject Matter

Claims 26-38 are allowed.

# Response to Arguments

Applicant's arguments with respect to claims 39 have been considered but are most in view of the new ground(s) of rejection.

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James L. Swiger whose telephone number is 571-272-5557. The examiner can normally be reached on Monday through Friday, 9:00am to 5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eduardo Robert can be reached on 571-272-4719. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
